Subject: Info

Morning PSC,

I have attached information and links to further help you as you begin assessment of facts. On large attachment of final safety analyst report, your area of section of interest is section 3.5 beginning at page 3-27. Please take note in previous email of pictures of no material present on containment. Your concrete psi for structural integrity will be zero factoring in zero materials. Your steel psi in this area will be zero factoring in no materials present.

Information to the PSC of Georgia. You are under a tremendous amount of pressure over these reactors. DOE and Trump Administration have told you if you stop they will expedite recovery of Grants by the government applying pressure. I am pro nuclear and I want to see the plants built safely and meeting the requirements.
